The Last Student Intake of 2022

Dec. 3-12 Only

Dec. 12 is the absolute cutoff date for this intake period.

The Dynamic Trading Master Course

*Master Practical Elliott Wave, Fib Time and Price and Multiple Time Frame Momentum Strategies
From Entry to Exit*

The *Dynamic Trading Master Course* is a complete curriculum that includes five main sections which are individual courses of themselves including:

Practical Elliott Wave Trade Strategies

Beyond Fib Retracements

Multiple Time Frame Momentum Strategies

Beyond Traditional Time Cycles

Real World Trade Plans and Strategies

The early release discount and initial student intake is available for this intake through Monday, Dec. 12. After Dec. 12, you may request to be put on the early notification for the next student intake in mid-June.

Dynamic Trading Master Course Brief Description

- **There are over 30 hours of video lesson materials.** Each lesson is 15 – 30 minutes. Plus, some lessons and each chapter includes a quiz and each course has a final exam. The quizzes and exams are an important part of the learning process.
- At the end of each chapter are **comprehensive support materials** that include notes, comments and chart illustrations of what you have learned in the chapter. The support materials are an important part of the learning process and the review. There are over 200 pages of summary / support material you can download to review and study.

The Dynamic Trading Master Course

*Master Practical Elliott Wave, Fib Time and Price and Multiple Time Frame Momentum Strategies
From Entry to Exit*

- A ***Dynamic Trading Master Course*** certification of completion is available to those who have completed the complete curriculum of five courses, each course final exam and a Course Certification exam. This is not a complicated process or difficult exam but does show you put the effort into learning all the course material and do have a proficiency in all the material included in the course. The certification will allow you to be part of webinars and special tutorials only for those who have completed the Course Certification.
- **No special software or trading platform is required.** As far as we know, most of the popular trading platforms have the basic functions of price retracements, popular momentum indicators, manual labeling features etc. that are needed for the course material.

A 35 Year Journey

The *Dynamic Trading Master Course* is the result of over 35 years of trading, teaching and developing practical training material for traders in over 30 countries. I wrote and produced the first self-study trading course that I am aware of in the late 80's. That course was an integration of Gann, Elliott Wave and Fibonacci time and price trade techniques, so you can see I've been doing this a long time. I've made an extensive study of accelerated learning techniques which I've applied to this latest comprehensive course.

A Year In Development

This course was over a year in development and production. Great care has been taken to present the material in the most efficient and logical format and progression. I hired Daniel Park of DapperText.com who developed certification courses for Techsmith for Camtasia, Snagit and more to produce the course to the highest standards. He has done a terrific job integrating the lesson material, quizzes, video and support materials.
